

Target	Constraints	Good Enough	Route
What does success look like?	Cost, resource and time constraints	High priority gains – must have items	What does “good enough” look like?
How will success be measured?	Major risks, issues and blockers	Early proof points – build confidence if proven, allow corrections if not proven	Major steps towards good enough
What are the timeframes for making progress towards success?	Actions required to address constraints	Low priority gains – sacrificial items	How do we measure incremental value and progress towards good enough

Target	Constraints	Good Enough	Route
